

## Quality Policy

Following the rule that product quality is a crucial factor in achieving long-term success and generating optimal profit, we design, produce and sell only the products which meet our customers' demands and expectations.

We strongly believe that without ensuring proper quality, it is impossible to gain customers' trust and respect, as well as to compete effectively on the market. Our motto included in the Quality Policy reads:

***"To be competitive by offering top quality products and short manufacturing lead times"***

We set the following goals for ourselves:

1. To maintain and develop Quality Management System in accordance with PN EN ISO 9001.
2. To ensure the expected standard of our products.
3. To meet the corresponding legal and other requirements.
4. To encourage staff development in terms of skills, qualifications improvement, professional ethics and quality.
5. To increase sales without ceasing to improve profitability.
6. To ensure comprehensive supply of cooling and air conditioning components and refrigeration plants to installation companies, network clients and refrigeration industry manufacturers.

At the same time, we commit ourselves to meeting expectations and to improving the effectiveness of the Quality Management System continuously.
